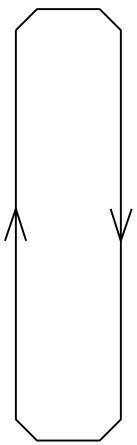
Event Processing

The Worker node complets an event and tells the Administrator about the results of its processing.



W -> A "I have completed my work on the event with Geo. Sect. L1 Trig. Num. xyz. The results are global A/R, 128 Spec Trig A/R."

I'm also implicitly telling you that I'm finished with the main memoryevent buffer slot that held this event as far as my event processing is concerned.

A -> L2HwFW "Here is the answer to the event with Geo. Sect. L1 Trig. Num. xyz. The results are global A/R, 128 Spec Trig A/R."

Admin Wait for the next "completed work on the event" message from the Worker.
