

Abrams Planetarium presents...

Astronomical Horizons

March 15, 2018 - 7:30 P.M.

Michigan's Extraterrestrial Visitors

This lecture series held at the Abrams Planetarium surveys the latest developments in astronomy. Astronomical Horizons is offered by the Department of Physics and Astronomy through its astronomy group and Abrams Planetarium.

There is no charge for admission.

On January 16, 2018 residents of southeast Michigan experienced the arrival of our latest visitor from outer space – the Hamburg meteorite. Join us for an evening exploring the history, stories, science and actual specimens of Michigan's historic meteorites. You'll hear stories about the latest fall and even be able to see one of the finest examples located. We encourage you to bring your finds from this exciting and rare event and share your story.
