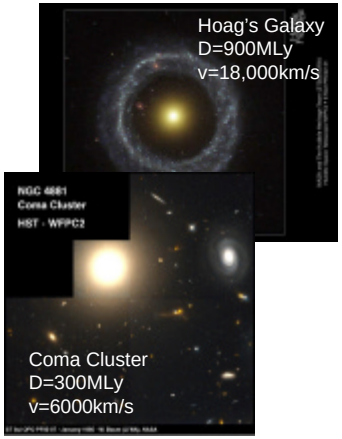
Hubble's Law—17 Oct

- Hubble's Law: More distant galaxies are moving away faster.
  Speed = H × Distance
- Universe is expanding
- Universe started with a Big Bang
- Age of the universe



Hoag's Galaxy

NGC4881, central galaxy in Coma Cluster

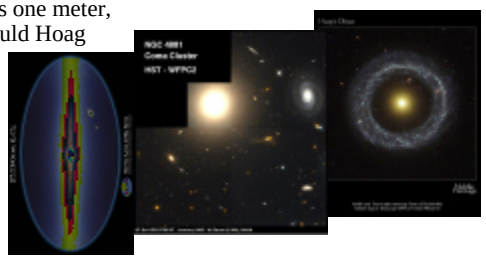
Milky Way Galaxy

Hubble's Law

- Velocity V is proportional to distance D
  - $V = H \times D$
- Demo: Let Coma & Hoag's Galaxy move according to Hubble's Law

	Speed	Dist
Milky Way	0 km/s	0 Mpc
Coma	6,000 km/s	100Mpc
Hoag's Object	18,000 km/s	300Mpc

1. If Coma moves one meter, how much should Hoag move?
   a. 1 m
   b. 3 m
   c. 1/3 m
   d. 9 m
   e. 1/9 m



Hubble's Law

- Velocity V is proportional to distance D
  - $V = H \times D$

	Speed	Dist
Milky Way	0 km/s	0 Mpc
Coma	6,000 km/s	100Mpc
Hoag's Object	18,000 km/s	300Mpc

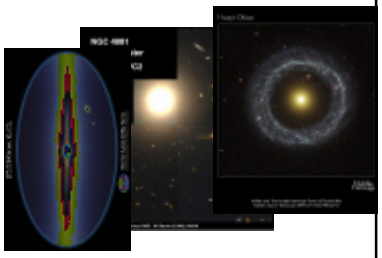
2. Hoag is 3 times as far as Coma. Is this still true in the future? Was this true in the past?
   a. YY
   b. YN
   c. NY
   d. NN

Hubble's Law

- $V = H \times D$

	Speed	Dist
Milky Way	0 km/s	0 Mpc
Coma	6,000 km/s	100Mpc
Hoag's Object	18,000 km/s	300Mpc

2. Hoag is 3 times as far as Coma. Is this still true in the future? Was this true in the past? YY.
- H's Law => Universe began in a Big Bang
  - Universe was very dense
  - What became Milky Way was very close to what became Coma & Hoag's Galaxy.
- Current physics can explain universe 10^{-10}s after Big Bang, when proto-Coma was 1 mm from proto-us.



Hubble's Law

- $V = H \times D$

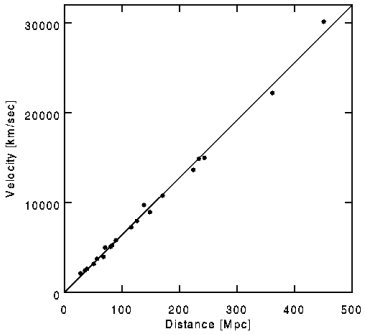
	Speed	Dist
Milky Way	0 km/s	0 Mpc
Coma	6,000 km/s	100Mpc
Hoag's Object	18,000 km/s	300Mpc

3. If we are in Coma, would H's Law apply?
   a. Y
   b. N

What does value of H imply?

- $V = H \times D$

4. What is the value of Hubble's constant. Express your answer in km/s/Mpc



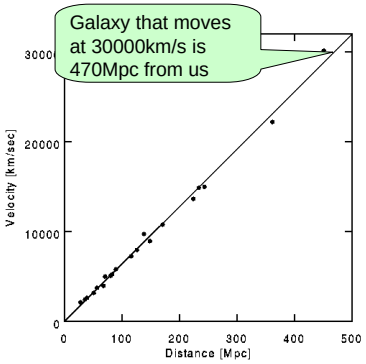
Hubble Diagram 2003

What does value of H imply?

- $V = H \times D$

4. What is the value of Hubble's constant? Express your answer in km/s/Mpc

- H=V/D
  = 30000km/s/(470Mpc)
  = 64km/s/Mpc
  = 64km/s/(3×10^{19}km)
  = 1/(15Byr)

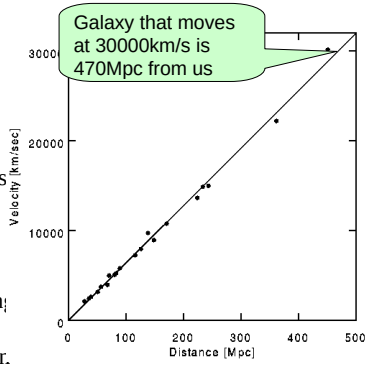


Hubble Diagram 2003

What does value of H imply?

- Write H's law in more familiar form
  $D = V \times (1/H)$
- 1/H = D/V
  = (470Mpc) / 30000km/s
  = 15Byr

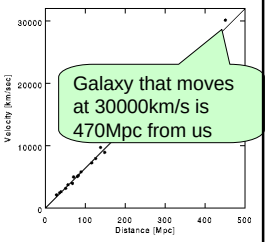
5. Some matter that was very near us soon after the Big Bang was movin at 30,000km/s. How far has it moved in 1 Byr? Ir. 15 Byr?



Hubble Diagram 2003

Value of H implies age of universe

- Write H's law in more familiar form
  $D = V \times (1/H)$
- 1/H = D/V
  = (470Mpc) / 30000km/s
  = 15Byr
- Some matter that was very near us soon after the Big Bang was moving at 30,000km/s.
- The age of the universe is 15 Byr.
  - In 15 Byr, that matter has moved 470 Mpc and become part of a galaxy.
  - In 1 Byr, that matter has not moved far enough to be part of a galaxy. U is older than 1 Byr.
- Be aware: We assumed matter does not speed up or slow down.



Hubble Diagram 2003

Summarizing questions

- Why does Hubble's Law imply a Big Bang?
- Do aliens on another galaxy also observe galaxies to move according to H's Law?
- If the motion of matter slows down, is the age of the universe longer or shorter than 1/H?
