## Linnemann,

## James T

Keep this exam CLOSED until advised by the instructor.
Fill out the bubble sheet: last name, first initial, student number, section number. Leave the code area empty.

120 minute long closed book exam.
Four 8.5 by 11 handwritten help sheets are allowed.
When done, hand in your bubble sheet and your exam. Keep your help sheets.

Thank you and good luck!
Possibly useful constants:

- $\mathrm{k}_{e}=8.99 \times 10^{9} \mathrm{Nm}^{2} / \mathrm{C}^{2}$
- $\epsilon_{0}=8.85 \times 10^{-12} \mathrm{As} /(\mathrm{Vm})$
- $\mu_{0}=4 \pi \times 10^{-7} \mathrm{Vs} /(\mathrm{Am})$
- $\mathrm{c}=3.00 \times 10^{8} \mathrm{~m} / \mathrm{s}$
- $\mathrm{e}=1.60 \times 10^{-19} \mathrm{C}$
- $\mathrm{m}_{e}=9.11 \times 10^{-31} \mathrm{~kg}$
- $\mathrm{h}=6.63 \times 10^{-34} \mathrm{Js}$
- $\mathrm{h}=4.14 \times 10^{-15} \mathrm{eVs}$
- $\mathrm{hc}=1240 \mathrm{eVnm}$
- Wien's constant $=2.898 \times 10^{-3} \mathrm{Km}$
- $1 \mathrm{eV}=1.60 \times 10^{-19} \mathrm{~J}$

James T Linnemann - PHY 232-Spring 2004-Sec. TA 3

Final Exam (05/06/2004)
$6 p t$ The figure shows two point charges. Calculate the magnitude of the electric field at point P . Use the following data: $\mathrm{Q}_{1}=-1.90 \mu \mathrm{C}, \mathrm{Q}_{2}=-1.50 \mu \mathrm{C}, \mathrm{d}_{1}=1.40 \mathrm{~m}, \mathrm{~d}_{2}=1.80$ m.

(in N/C)

$$
\begin{array}{rlll}
\mathbf{1 . A} \bigcirc 4.55 \times 10^{3} & \mathbf{B} \bigcirc 6.06 \times 10^{3} & \mathbf{C} \bigcirc 8.05 \times 10^{3} \\
\mathbf{D} \bigcirc 1.07 \times 10^{4} & \mathbf{E} \bigcirc 1.42 \times 10^{4} & \mathbf{F} \bigcirc 1.89 \times 10^{4} \\
\mathbf{G} \bigcirc 2.52 \times 10^{4} & \mathbf{H} \bigcirc 3.35 \times 10^{4} & &
\end{array}
$$

$6 p t$ Calculate the size of the force on a charge $\mathrm{Q}=+1.50$ $\mu \mathrm{C}$ placed at P due to the two charges from the previous problem.
(in N)

$$
\begin{array}{rlll}
\mathbf{2 . A} \bigcirc 3.64 \times 10^{-3} & \mathbf{B} \bigcirc 4.26 \times 10^{-3} & \mathbf{C} \bigcirc & 4.99 \times 10^{-3} \\
\mathbf{D} \bigcirc 5.84 \times 10^{-3} & \mathbf{E} \bigcirc & 6.83 \times 10^{-3} & \mathbf{F} \bigcirc \\
\mathbf{G} \bigcirc 9.99 \times 10^{-3} \\
9.35 \times 10^{-3} & \mathbf{H} \bigcirc 1.09 \times 10^{-2} & &
\end{array}
$$

$4 p t$ A parallel-plate air capacitor of area $\mathrm{A}=22.1 \mathrm{~cm}^{2}$ and plate separation of $\mathrm{d}=3.90 \mathrm{~mm}$ is charged by a battery to a voltage of 52.0 V . What is the charge on the capacitor? (in nC )

$$
\begin{array}{rlll}
\mathbf{3 . A} \bigcirc 1.80 \times 10^{-1} & \mathbf{B} \bigcirc 2.61 \times 10^{-1} & \mathbf{C} \bigcirc & 3.78 \times 10^{-1} \\

\end{array}
$$

James T Linnemann - PHY 232-Spring 2004-Sec. TA 5
Final Exam (05/06/2004)
$4 p t$ The picture shows a battery connected to two cylindrical wires in parallel. Both wires are made out of the same material and are of the same length, but the diameter of wire $\mathbf{A}$ is twice the diameter of wire $\mathbf{B}$.

Choose the correct answer.
9. $\mathbf{A} \bigcirc$ The resistance of wire $B$ is equal to the resistance of wire A .
$\mathbf{B} \bigcirc$ The resistance of wire $B$ is four times as large as the resistance of wire A.
$\mathbf{C} \bigcirc$ The resistance of wire B is half as large as the resistance of wire A.
$\mathbf{D} \bigcirc$ The resistance of wire B is twice as large as the resistance of wire A.
$\mathbf{E} \bigcirc$ The resistance of wire B is one quarter as large as the resistance of wire A.
$4 p t$ Choose the correct answer.
10. $\mathbf{A} \bigcirc$ The voltage drop across wire $B$ is half as large as the voltage drop across wire A.
$\mathbf{B} \bigcirc$ The voltage drop across wire B is equal to the voltage drop across wire A.
$\mathbf{C} \bigcirc$ The voltage drop across wire B is four times as large as the voltage drop across wire A .
$\mathbf{D} \bigcirc$ The voltage drop across wire $B$ is twice as large as the voltage drop across wire A.
$\mathbf{E} \bigcirc$ The voltage drop across wire B is one quarter as large as the voltage drop across wire A .
$4 p t$ Choose the correct answer.
11. $\mathbf{A} \bigcirc$ The power dissipated in wire $B$ is $1 / 16$ as large as the power dissipated in wire A.
$\mathbf{B} \bigcirc$ The power dissipated in wire B is one quarter as large as the power dissipated in wire A.
$\mathbf{C} \bigcirc$ The power dissipated in wire B is equal to the power dissipated in wire A.
$\mathbf{D} \bigcirc$ The power dissipated in wire B is 4 times as large as the power dissipated in wire A .
$\mathbf{E} \bigcirc$ The power dissipated in wire B is 16 times as large as the power dissipated in wire A .

James T Linnemann - PHY 232-Spring 2004-Sec. TA 6
Final Exam (05/06/2004)

4 pt A point charge Q moving in a uniform magnetic field of 1.95 T experiences a force of $1.21 \times 10^{-12} \mathrm{~N}$. The velocity of the charge is perpendicular to the magnetic field. If the magnetic field points South and the force points out of the page, then choose the single correct answer. (In this problem we use the points of the compass for directions on the paper with North pointing to the top of the page, and 'into' and 'out of' to indicate directions with respect to the page.)
12. $\mathbf{A} \bigcirc \mathrm{Q}$ is negative, moving West.
$\mathbf{B} \bigcirc \mathrm{Q}$ is negative, moving South.
$\mathbf{C} \bigcirc \mathrm{Q}$ is negative, moving North.
$\mathbf{D} \bigcirc$ Q is positive, moving North.
$\mathbf{E} \bigcirc \mathrm{Q}$ is positive, moving East.
$\mathbf{F} \bigcirc \mathrm{Q}$ is positive, moving West.

4 pt The speed of the point charge is $3.87 \times 10^{6} \mathrm{~m} / \mathrm{s}$. Calculate the magnitude of the charge.
(in C)

$8 p t$ A square loop of wire with a small resistance is moved with constant speed from a field free region into a region of uniform B field (B is constant in time) and then back into a field free region to the left. The self inductance of the loop is negligible.
$\times \times \times \times \times \times \times \times$
$\times \times \times \times \times \times \times \times$

$\times \times \times \times \times \times \times \times$
$\times \times \times \times \times \times \times$
$\triangleright$ When entering the field the coil experiences a magnetic force to the left.
14. $\mathbf{A} \bigcirc$ True $\mathbf{B} \bigcirc$ False
$\triangleright$ When leaving the field the coil experiences a magnetic force to the left.
15. $\mathbf{A} \bigcirc$ True $\mathbf{B} \bigcirc$ False
$\triangleright$ Upon entering the field, a clockwise current flows in the loop.
16. $\mathbf{A} \bigcirc$ True $\mathbf{B} \bigcirc$ False
$\triangleright$ While the loop is entirely in the field, the emf in the loop is zero.
17. $\mathbf{A} \bigcirc$ True $\mathbf{B} \bigcirc$ False

James T Linnemann - PHY 232-Spring 2004-Sec. TA 7
Final Exam (05/06/2004)

10 pt After having been in the open position for a very long time, the switch $S$ in the following circuit is closed $(t=0)$. The current through the battery immediately after the switch is closed is $\mathrm{i}_{0}(\mathrm{t}=0)$ and its final value (after a very long time) is $\mathrm{i}_{\text {inf }}\left(\mathrm{t} \rightarrow\right.$ infinity.) Calculate $\mathrm{i}_{\text {inf }} / \mathrm{i}_{0}$, the ratio of the two currents. Use the following data: $\mathrm{EMF}=6.0 \mathrm{~V}, \mathrm{R}_{1}=53.0$ $\Omega, \mathrm{R}_{2}=41.0 \Omega, \mathrm{~L}=35.0 \mathrm{mH}$.

$$
\begin{array}{clll}
\mathbf{1 8 .} \mathbf{A} \bigcirc 5.82 \times 10^{-1} & \mathbf{B} \bigcirc 8.44 \times 10^{-1} & \mathbf{C} \bigcirc 1.22 \\
\mathbf{D} \bigcirc 1.77 & \mathbf{E} \bigcirc 2.57 & \mathbf{F} \bigcirc 3.73 \\
\mathbf{G} \bigcirc 5.41 & \mathbf{H} \bigcirc 7.84 & &
\end{array}
$$

$4 p t$ Consider the RLC circuit shown in the figure driven by a sinusoidal emf. Use the following data: $\varepsilon_{R M S}=180 \mathrm{~V}$, $\mathrm{R}=760 \Omega, \mathrm{~L}=33.0 \mathrm{mH}, \mathrm{C}=0.180 \mathrm{mF}$.

Calculate the RMS current through the capacitor at the resonance frequency.
(in A)

$$
\begin{array}{rlll}
19 . A \bigcirc 1.89 \times 10^{-1} & \mathbf{B} \bigcirc 2.37 \times 10^{-1} & \mathbf{C} \bigcirc 2.96 \times 10^{-1} \\
\mathbf{D} \bigcirc 3.70 \times 10^{-1} & \mathbf{E} \bigcirc 4.63 \times 10^{-1} & \mathbf{F} \bigcirc 5.78 \times 10^{-1} \\
\mathbf{G} \bigcirc 7.23 \times 10^{-1} & \mathbf{H} \bigcirc 9.03 \times 10^{-1} & &
\end{array}
$$

$2 p t$ What is the resonant frequency of this circuit? (in Hz )

$$
\begin{array}{rlll}
\mathbf{2 0 . A} \bigcirc 2.98 \times 10^{1} & \mathbf{B} \bigcirc 3.48 \times 10^{1} & \mathbf{C} \bigcirc 4.08 \times 10^{1} \\
\mathbf{D} \bigcirc 4.77 \times 10^{1} & \mathbf{E} \bigcirc 5.58 \times 10^{1} & \mathbf{F} \bigcirc 6.53 \times 10^{1} \\
\mathbf{G} \bigcirc 7.64 \times 10^{1} & \mathbf{H} \bigcirc 8.94 \times 10^{1} & &
\end{array}
$$

$6 p t$ Calculate the RMS voltage across the inductor at the resonance frequency.
(in V)
