

AST101 Quiz #2 — The Planisphere

Take Home, due September 29 at beginning of class.

Before answering the following questions,
be sure to mark the **16 direction points** on
the horizon of your planisphere (use grid).
All times refer to **local time (non-daylight)**.

Name: _____

1. What bright star is setting between the west and west-southwest on August 20 around 9 p.m.?
2. What bright star sits just above the south-southwest horizon on August 15 around 9 p.m.?
3. The bright star Arcturus in Bootes sets about what time on September 15? (remember to include a.m. or p.m.)
4. In what direction does the star Arcturus set? (To the nearest 16th of a circle: N, NNE, NE, ENE, E, etc.)
5. What time on July 15 is the bright star Antares due south (closest to the south horizon)? (remember a.m. or p.m.)

6. What bright star rises near the east-northeast (ENE) around 8 p.m. in about January 10?
7. The stars on December 20 at 8 p.m. are in the same position as they are at what time on September 20? (remember a.m. or p.m.)
8. How many hours does the bright star Altair spend above the horizon?
9. What is the approximate altitude (in degrees) of the North Star above the northern point of the horizon? (Use grid.)
10. What time does the sun set on March 21? (Pisces equator/ecliptic crossing)
