Chapter 6

Work and Energy

continued

Chapters 1–5

Motion equations were been developed, that relate the concepts of velocity, speed, displacement, time, and with a particular emphasis on the acceleration of an object.

Newton discovered three laws that define the concept of a force. The first two laws provide the relationship of forces to the acceleration of an object. The third law describes the nature of forces at the point of contact between two objects.

The effect of forces, including human generated forces, on the motion of an object have been solved in common situations. The forces of gravity, friction, (elastic) tension and compression, have been desribed.

Relate these to **Energy**

Work: the effect of a force acting on an object making a displacement.

$$W = (F\cos\theta)s,$$

where W is the work done, F, s are the magnitudes of the force and displacement, and θ is the angle between $\vec{\mathbf{F}}$ and $\vec{\mathbf{s}}$.

The origin of the force does not affect the calculation of the work done. Work can be done by: gravity, elastic, friction, explosion, or human forces.

Kinetic energy: property of a mass (m) and the square of its speed (v).

$$KE = \frac{1}{2}mv^2$$

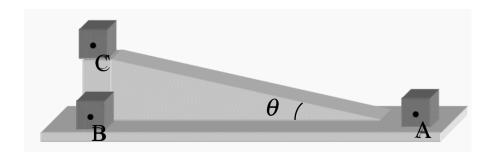

Work-Energy Theorem: Work changes the Kinetic Energy of an object.

$$KE_f = KE_0 + W$$
 or $KE_f - KE_0 = W$

Quiz 5

- C&J page 158 (middle), Check Your Understanding #4: "A suitcase ..."
- 2. An elevator descends a shaft at a constant speed. Only tension in the cable and the gravitational force act on the elevator. Let $W_{\rm G}$ = work by gravity, and $W_{\rm T}$ = work by tension. Pick the true statement:
 - a) $W_{\rm T} = {\rm zero \ joules}$.
 - **b)** $W_{\rm T} + W_{\rm G} = \text{zero joules}.$
 - c) $W_{\rm G} = \text{zero joules}$
 - **d)** $|W_{\rm G}| > |W_{\rm T}|$
 - **e)** $|W_{\rm T}| > |W_{\rm G}|$
- 3. A sanding machine moves a sanding block 45 times back and forth each time moving a distance of 0.15m. The normal force is 1.8 N and the coeficient of friction is 0.92. How much work is done by the machine?
 - **a)** +12 J
 - **b)** -12 J
 - c) + 24 J
 - **d)** -24 J
 - e) zero J

- 4. Determine the amount of work done in firing a 2.0-kg projectile to an initial speed of 50 m/s. Neglect any effects due to air resistance
 - **a)** 900 J
 - **b)** 1600 J
 - **c)** 2500 J
 - **d)** 4900J
 - e) zero
- 5. On a frictionless surfaces, a box can be moved up the ramp (A to C) with gravity doing work W_{AC} , or horizontally and then up (A to B to C) with gravity doing work W_{ABC} . Compare this work on the two paths.
 - a) W_{ABC} is much greater than W_{AC}
 - **b)** $W_{\rm ABC}$ is slightly greater than $W_{\rm AC}$
 - c) W_{ABC} is much less than W_{AC}
 - **d)** W_{ABC} is slightly less than W_{AC}
 - e) The work done by gravity is the same on both paths

Quiz 5 a)
$$W$$
 is +, up, W is -, down

- C&J page 158 (middle), Check Your Understanding #4: "A suitcase ..."
- An elevator descends a shaft at a constant speed. Only tension in the cable and the gravitational force act on the elevator. Let $W_{\rm G}$ = work by gravity, and W_T = work by tension. Pick the true statement:
 - a) $W_{\rm T} = {\rm zero \ joules}$.
 - **b)** $W_{\rm T} + W_{\rm G} = \text{zero joules}.$
 - c) $W_G = \text{zero joules}$
 - **d)** $|W_{G}| > |W_{T}|$.
 - **e)** $|W_{\rm T}| > |W_{\rm G}|$
- A sanding machine moves a sanding block 45 times back and forth each time moving a distance of 0.15m. The normal force is 1.8 N and the coeficient of friction is 0.92. How much work is done by the machine?
 - **a)** +12 J
 - **b)** -12 J
 - c) + 24 J
 - **d)** -24 J
 - e) zero J

Quiz 5 a)
$$W$$
 is +, up, W is -, down

- C&J page 158 (middle), Check Your Understanding #4: "A suitcase ..."
- An elevator descends a shaft at a constant speed. Only tension in the cable and the gravitational force act on the elevator. Let $W_{\rm G}$ = work by gravity, and W_T = work by tension. Pick the true statement:
 - a) $W_{\rm T} = {\rm zero \ joules}$.
 - **b)** $W_{\rm T} + W_{\rm G} = \overline{\text{zero joules}}$.
 - c) $W_G = \text{zero joules}$
 - **d)** $|W_{G}| > |W_{T}|$.
 - **e)** $|W_{\rm T}| > |W_{\rm G}|$

lowered distance s, T = mg $W_{\rm T} = (T\cos 180^{\circ})s, \ W_{\rm G} = (mg\cos 0^{\circ})s$ $W_{\mathrm{T}} = -mgL, \quad W_{\mathrm{G}} = +mgL$ $W_{\rm Net} = W_{\rm T} + W_{\rm G} = 0$

- 3. A sanding machine moves a sanding block 45 times back and forth each time moving a distance of 0.15m. The normal force is 1.8 N and the coeficient of friction is 0.92. How much work is done by the machine?
 - **a)** +12 J
 - **b)** -12 J
 - + 24 J
 - **d)** -24 J
 - e) zero J

Quiz 5

a)
$$W$$
 is +, up, W is -, down

- 1. C&J page 158 (middle), Check Your Understanding #4: "A suitcase ..."
- 2. An elevator descends a shaft at a constant speed. Only tension in the cable and the gravitational force act on the elevator. Let W_G = work by gravity, and W_T = work by tension. Pick the true statement:
 - a) $W_{\rm T} = {\rm zero \ joules}$.
 - **b)** $W_{\rm T} + W_{\rm G} = \text{zero joules}.$
 - c) $W_G = \text{zero joules}$
 - **d)** $|W_{G}| > |W_{T}|$.
 - **e)** $|W_{\rm T}| > |W_{\rm G}|$

lowered distance
$$s$$
, $T = mg$

$$W_{\rm T} = (T\cos 180^{\circ})s$$
, $W_{\rm G} = (mg\cos 0^{\circ})s$

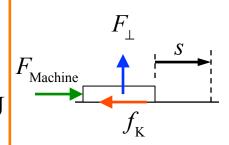

$$W_{\rm T} = -mgL$$
, $W_{\rm G} = +mgL$

$$W_{\rm Net} = W_{\rm T} + W_{\rm G} = 0$$

- 3. A sanding machine moves a sanding block 45 times back and forth each time moving a distance of 0.15m. The normal force is 1.8 N and the coeficient of friction is 0.92. How much work is done by the machine?
 - **a)** +12 J
 - **b)** −12 J
 - c) + 24 J
 - **d)** -24 J
 - e) zero J

$$f_{\rm K} = \mu_{\rm K} F_{\perp} = 0.92 \cdot 1.8 \,\text{N} = 1.7 \,\text{N}$$

work each stroke:
 $w = (f_{\rm K} \cos 0^{\circ}) s = +(1.7 \,\text{N})(0.15 \,\text{m}) = +0.26 \,\text{J}$
Work for 45 times: $W = 45(+0.26 \,\text{J}) = +12 \,\text{J}$

4. Determine the amount of work done in firing a 2.0-kg projectile to an initial speed of 50 m/s. Neglect any effects due to air resistance

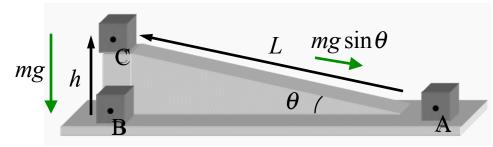

- **a)** 900 J
- Work changes kinetic energy, $KE_0 = 0$
- **b)** 1600 J
- $W = KE_f KE_0 = \frac{1}{2}mv^2 = (0.5)(2.0 \text{ kg})(50 \text{ m/s})^2 = 2500 \text{ J}$
- **c)** 2500 J
- **d)** 4900J
- e) zero
- 5. On a frictionless surfaces, a box can be moved up the ramp (A to C) with gravity doing work W_{AC} , or horizontally and then up (A to B to C) with gravity doing work W_{ABC} . Compare this work on the two paths.
 - a) $W_{\rm ABC}$ is much greater than $W_{\rm AC}$
 - **b)** $W_{\rm ABC}$ is slightly greater than $W_{\rm AC}$
 - c) W_{ABC} is much less than W_{AC}
 - **d)** $W_{\rm ABC}$ is slightly less than $W_{\rm AC}$
 - e) The work done by gravity is the same on both paths

4. Determine the amount of work done in firing a 2.0-kg projectile to an initial speed of 50 m/s. Neglect any effects due to air resistance

- **a)** 900 J
- **b)** 1600 J
- **c)** 2500 J
- **d)** 4900J
- e) zero

Work changes kinetic energy,
$$KE_0 = 0$$

 $W = KE_f - KE_0 = \frac{1}{2}mv^2 = (0.5)(2.0 \text{ kg})(50 \text{ m/s})^2 = 2500 \text{ J}$

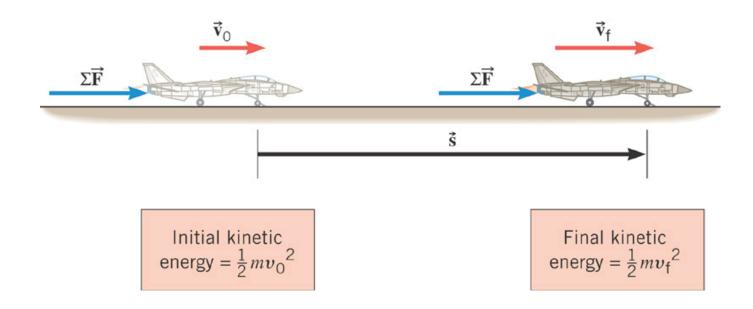

- 5. On a frictionless surfaces, a box can be moved up the ramp (A to C) with gravity doing work W_{AC} , or horizontally and then up (A to B to C) with gravity doing work W_{ABC} . Compare this work on the two paths.
 - a) $W_{\rm ABC}$ is much greater than $W_{\rm AC}$
 - **b)** $W_{\rm ABC}$ is slightly greater than $W_{\rm AC}$
 - c) W_{ABC} is much less than W_{AC}
 - **d)** W_{ABC} is slightly less than W_{AC}

$$W_{AC} = (F_{\parallel} \cos 180^{\circ}) L = -F_{\parallel} L = -(mg \sin \theta) L$$

$$W_{ABC} = (mg \cos 180^{\circ}) h, h = L \sin \theta$$

$$= -mgL \sin \theta$$

e) The work done by gravity is the same on both paths

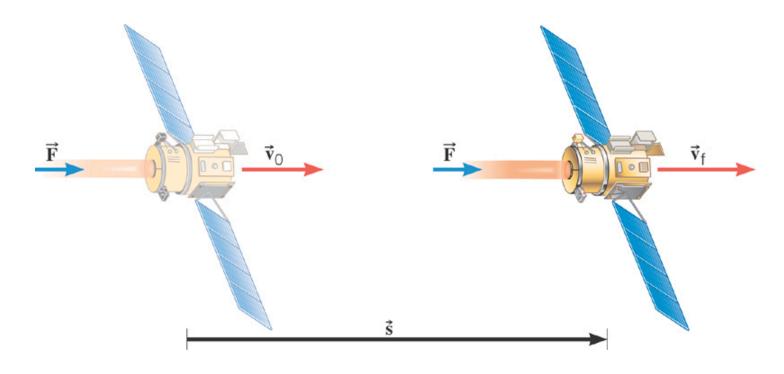

THE WORK-ENERGY THEOREM

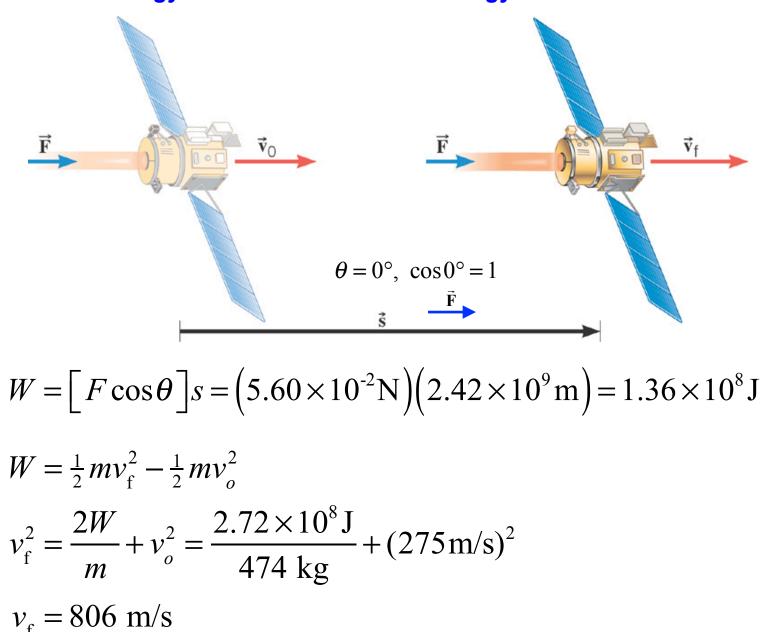

When a net external force does work on an object, the kinetic energy of the object changes according to

$$W = KE_f - KE_0 = \frac{1}{2}mv_f^2 - \frac{1}{2}mv_0^2$$

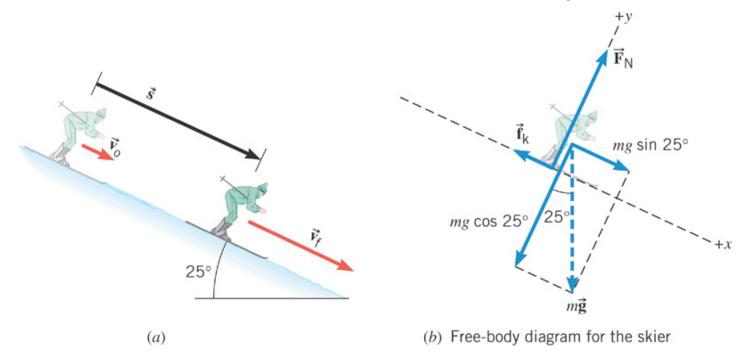

Example 4 Deep Space 1

The mass of the space probe is 474-kg and its initial velocity is 275 m/s. If the 56.0-mN force acts on the probe through a displacement of 2.42×10⁹m, what is its final speed?

Familiar decomposition of the gravitation force, mg downward

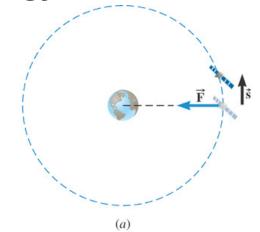

Choosing downward as + In this case the net force is $\sum F = mg \sin 25^{\circ} - f_k$

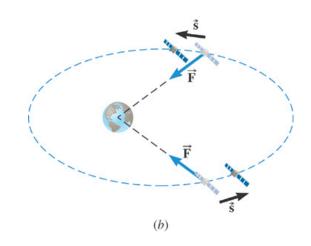

$$\sum F = mg \sin 25^{\circ} - f_k$$
 is given as 71 N

Conceptual Example 6 Work and Kinetic Energy

A satellite is moving about the earth in a circular orbit. Does kinetic energy change during the motion?

A satellite is moving about the earth in an elliptical orbit. Does kinetic energy change during the motion?

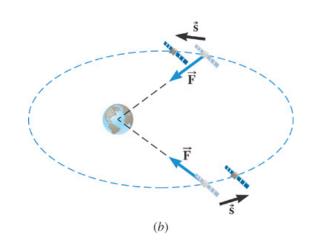

Conceptual Example 6 Work and Kinetic Energy

A satellite is moving about the earth in a circular orbit. Does kinetic energy change during the motion?

(work)
$$W = (F \cos \theta)s$$
, but between $\vec{\mathbf{F}}$ and $\vec{\mathbf{s}}$, $\theta = 90^{\circ}$
= $(F \cdot \cos 90^{\circ})s = ZERO$

A satellite is moving about the earth in an elliptical orbit. Does kinetic energy change during the motion?

(a)

Conceptual Example 6 Work and Kinetic Energy

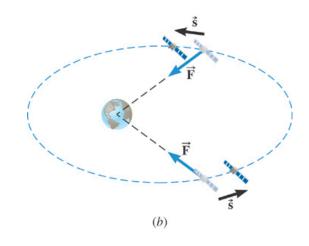

A satellite is moving about the earth in a circular orbit. Does kinetic energy change during the motion?

(work)
$$W = (F \cos \theta)s$$
, but between $\vec{\mathbf{F}}$ and $\vec{\mathbf{s}}$, $\theta = 90^{\circ}$
= $(F \cdot \cos 90^{\circ})s = ZERO$

$$KE_{\rm f} - KE_{\rm o} = W$$

= 0 (no change in kinetic energy)

A satellite is moving about the earth in an elliptical orbit. Does kinetic energy change during the motion?

(a)

Conceptual Example 6 Work and Kinetic Energy

A satellite is moving about the earth in a circular orbit. Does kinetic energy change during the motion?

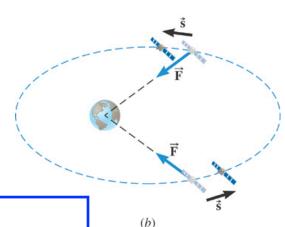

(work)
$$W = (F \cos \theta)s$$
, but between $\vec{\mathbf{F}}$ and $\vec{\mathbf{s}}$, $\theta = 90^{\circ}$
= $(F \cdot \cos 90^{\circ})s = ZERO$

$$KE_f - KE_0 = W$$

= 0 (no change in kinetic energy)

A satellite is moving about the earth in an elliptical orbit. Does kinetic energy change during the motion?

(work) $W = (F \cos \theta)s$, θ not always equal to 90° kinetic energy increases at places and decreases at others.

(a)

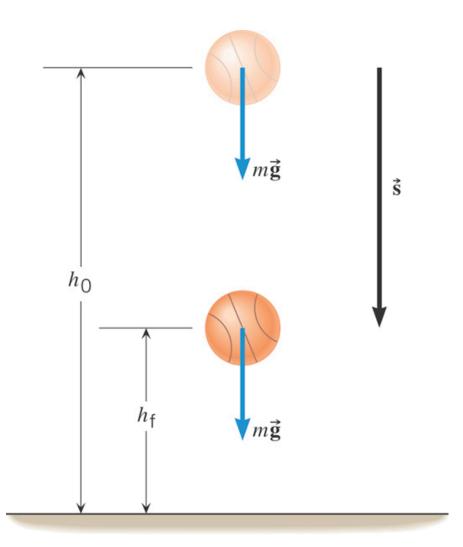

6.3 Gravitational Potential Energy

This θ is the angle between $\vec{\mathbf{F}}$ and $\vec{\mathbf{s}}$.

$$W = (F\cos\theta)s$$
$$= mgs$$

$$s = \text{distance of fall} = (h_0 - h_f)$$

$$W_{\rm G} = mg(h_0 - h_{\rm f})$$

Why use $(h_0 - h_f)$ instead of s?

 \Rightarrow because we already have KE_f and KE_0

6.3 Gravitational Potential Energy

When returning to the initial height, h_0 , the work done by gravity is zero. There is no displacement, s = 0.

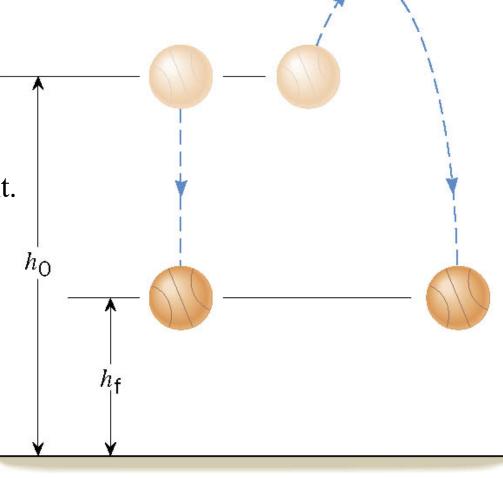

Work by the gravitational force is the same over the two paths

$$W_G = mg(h_0 - h_f)$$

Same starting and ending height.

Gravity is unusual!

It is a "conservative force".

6.4 Conservative Versus Nonconservative Forces

DEFINITION OF A CONSERVATIVE FORCE

Version 1 A force is conservative when the work it does on a moving object is independent of the path between the object's initial and final positions.

Version 2 A force is conservative when it does no net work on an object moving around a closed path, starting and finishing at the same point.

Also:

Version 3 A force is conservative when the energy absorbed from a mass by the force can be returned to the mass without loss by that force.

6.4 Conservative Versus Nonconservative Forces

Table 6.2 Some Conservative and Nonconservative Forces

Conservative Forces

Gravitational force (Ch. 4)

Elastic spring force (Ch. 10)

Electric force (Ch. 18, 19)

Nonconservative Forces

Static and kinetic frictional forces

Air resistance

Muscular forces

Explosions

Jet or rocket forces

6.3 Gravitational Potential Energy

Because gravity is a conservative force, when a mass moves upward against the gravitational force, the kinetic energy of the mass decreases, but when the mass falls to its initial height that kinetic energy returns completely to the mass.

When the kinetic energy decreases, where does it go?

DEFINITION OF GRAVITATIONAL POTENTIAL ENERGY

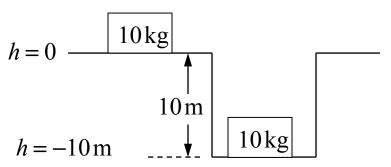

The gravitational potential energy PE is the energy that an object of mass m has by virtue of its position relative to the surface of the earth. That position is measured by the height h of the object relative to an arbitrary zero level:

PE =
$$mgh$$
 1 N·m = 1 joule (J)
(h can be + or –)

Clicker Question 6.1

The potential energy (mgh) of a 10 kg mass on the surface of the earth is zero. What is the potential energy of the mass in a 10 m deep hole?

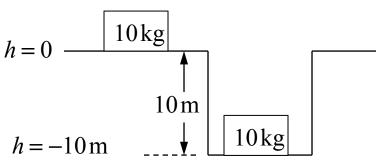

- a) 0J
- b) 98J
- c) 98J
- d) 980J
- e) 980 J

Clicker Question 6.1

The potential energy (mgh) of a 10 kg mass on the surface of the earth is zero. What is the potential energy of the mass in a 10 m deep hole?

- a) 0J
- b) 98J
- c) 98J
- d) 980J
- e) 980 J

$$PE = mgh = (10\text{kg})(9.8 \text{ m/s}^2)(-10\text{m})$$

= -980 J

6.3 Gravitational Potential Energy

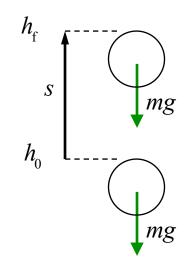

Moving upward

Gravitational work is negative.

$$W_{G} = (F\cos 180^{\circ})s$$
$$= -mg(h_{f} - h_{0})$$

Gravitational Potential Energy increases.

$$PE_{f} - PE_{0} = mg(h_{f} - h_{0})$$
$$= -W_{G}$$

Work-Energy Theorem becomes:

$$KE_{f} - KE_{0} = W_{G}$$
$$= -(PE_{f} - PE_{0})$$

 $KE_f + PE_f = KE_0 + PE_0$ Conservation of Energy
