

PHY 410 – Spring 2010**Exam #1****PLEASE WAIT UNTIL YOU ARE TOLD TO BEGIN THE EXAM**

While waiting, carefully fill in the information requested below

Your Name:.....**Your Student Number:**.....**There are 4 problems. Please answer them all. Total time is 1 Hour****USEFUL CONSTANTS AND EQUATIONS**Stirling's formula: $\ln N! \sim N \ln N - N$ when $N \gg 1$

$$\text{Thermal wavelength } \lambda_{th} = \sqrt{\frac{2\pi\hbar^2}{M\tau}}$$

$$\text{Quantum concentration } n_Q = \left(\frac{M\tau}{2\pi\hbar^2}\right)^{3/2} = \frac{1}{\lambda_{th}^3}$$

$$\text{Planck's const. } \hbar = 1.05459 \times 10^{-34} \text{ Js}$$

$$\text{Boltzmann const. } k_B = 1.38066 \times 10^{-23} \text{ J / K}$$

$$\text{amu} = 1.66057 \times 10^{-27} \text{ kg}$$

Problem 1 (10 points)

Consider a system containing 6 spins. Each spin can point either up or down. Magnetic moment associated with each spin is m . There is no external magnetic field. (4 points)

- (i) What is the total number of microstates for this system?

- (ii) If all the microstates are equally accessible then what is the probability of finding the system in any one of these microstates?

- (iii) What is the probability of finding the system in the macrostate $N_{\uparrow} = 4$?

Now apply an external magnetic field B . Energy of each spin is either $-mB$ (when \uparrow) or $+mB$ (when \downarrow). The system is in equilibrium with a reservoir at temperature τ . (6 points)

- (i) What is the probability of finding the system with total energy $U = 0$?

- (ii) What is the probability of finding the system with total energy $U = 6mB$?

Problem 2 (15 points)

Thermal properties of an impurity atom adsorbed on the surface of a solid can be described by a simple model consisting of finite number of microstates with different energies. A simple such model consists of 4 microstates, one with energy 0 and the other three, each with energy $\Delta > 0$. The impurity atom and the solid are in equilibrium at temperature τ .

- (i) What is the partition function for this impurity atom? (3 points)

- (ii) What is its average energy $U(\tau)$? Plot qualitatively U as a function of τ/Δ . (6 points)

- (iii) What is the heat capacity?(3 points)

- (iv) Find the temperature τ_0 when the average energy $U(\tau_0)$ is equal to $\Delta/2$.(3 points)

Problem 3 (13 points)

An ideal gas of N indistinguishable He atoms is contained inside a cubic box of volume V at $T = 100K$ and density $n = 10^{24} / m^3$.

(i) What is the thermal wave length $\lambda_{th,He}$ associated with these atoms? Can we treat this system classically or not, why? (5 points)

(ii) What is the partition function of this gas Z_{He} if the partition function of 1 He atom is $Z_{1,He} = \left(\frac{V}{\lambda_{th,He}^3} \right)$? (3 points) (Express your answer in terms of N, V , and $\lambda_{th,He}$.)

(iii) What is the Helmholtz free energy/atom and the average energy/atom? (5 points) (Show your work)

Problem 4 (12 points)

Consider a system consisting of 3 quantum harmonic oscillators, all with the same frequency ω . Microstates of each oscillator are characterized by an integer $s = 0, 1, 2, \dots$ with energy $\varepsilon_s = s\hbar\omega$.

(i) If the total energy of this system $U = 2\hbar\omega$, how many microstates are associated with this energy? Enumerate these microstates using a suitable notation (4points)

(ii) Bring a second system consisting of 4 magnets in an external field B , each magnet can point either parallel or antiparallel to B , with total magnetic moment exactly equal to 0. Don't let these systems exchange energy. What is the total number of microstates associated with the combined oscillator-magnet system?(3 points)

(iii) Now consider a different physical situation where a system of N_1 quantum harmonic oscillators with average energy/atom, $U_1/N_1=4\hbar\omega$ is brought in thermal contact with a system of N_2 noninteracting magnets in the presence of an external field B , with average energy/magnet $U_2/N_2=0$. In which direction will the energy flow, from oscillators to magnets or vice-versa? (Hint: compare the temperatures of the two systems) Give reasons for your answer. (5 points)
