

List of Figures

1	Adamantane structure	1
2	Armchair nanotube structure	3
3	Electronic structure of a graphene monolayer and bi-layer	5
4	Atomic binding energy in different carbon clusters	6
5	Brillouin zone of graphene and graphite	8
6	Bucky bamboo structure	8
7	Bucky shuttle	9
8	C ₆₀ fullerene structure	10
9	Nano-capillarity in nano-pores and nanotubes	12
10	Structural forms and relationships between sp ² hybridized carbon allotropes	12
11	SEM image of an individual PAN-based carbon fiber	13
12	Carbonized polyacetylene	14
13	Structure, vibrational and electronic structure of an infinite carbon chain	16
14	Definition of the chiral index	18
15	Chiral nanotube structure	18
16	Chiral vector defining the wrapping of graphene to a nanotube	19
17	Deformation energy of graphene described by continuum elasticity theory	20

18	Strain energy in fullerenes and nanotubes	21
19	Relative energies and structural evolution of onions .	22
21	TEM images of cup-stacked fibers	23
20	Structure of the C ₂₀ H ₁₀ corannulene molecule	23
22	Cycloaddition reaction initiating the fusion of C ₆₀ fullerenes	23
24	Phonon band structure of diamond	26
23	Structure of the diamond lattice	27
25	Dirac cone in the electronic structure of graphene . .	28
26	Schematic of a dome structure terminating a nanotube	29
27	Schematic representation of common graphene nanoribbons (GNRs)	31
28	Elbow bends in a nanotube hook structure	31
29	Van Hove singularities in the electronic density of states of carbon nanotubes	33
30	Electronic density of states (DOS) of a graphene monolayer	34
31	Schematic of an exciton in a nanotube	36
32	TEM image of metal nanocrystals inside an onion shell	38
33	TEM image of folded graphene nanoribbons	38
34	Structure of selected fullerenes	40
35	Structure of a very large C ₇₂₀ fullerene	41
36	Microscopic mechanism of fullerene fusion	43

38	Microscopic mechanism of nanotube fusion	44
40	Electronic band structure of a graphene monolayer . .	48
41	Ground state distribution of electron spins and transport in graphene nanoribbons (GNRs) with a zigzag edge	48
42	Morphology of graphene nanoribbons with armchair and zigzag edges	50
45	Electronic band structure and density of states of graphite	53
46	Schematic growth mechanism of different carbon nanostructures	54
47	Structure of haeckelites	56
48	Handedness of chiral nanotubes	56
50	Structural deformations and energy of twisted ropes of carbon nanotubes	58
51	Schematic of a nanotube-based hook	60
37	TEM images of progressing fullerene fusion inside a nanotube	62
39	Structure of a graphene monolayer	63
43	Unzipping mechanism of a carbon nanotube to a graphene nanoribbon (GNR)	63
44	Structure of hexagonal graphite with AB layer stacking	63
49	SEM images of helical carbon nanotubes	64
52	Kataura plot of optical transition energies in carbon nanotubes as a function of diameter	66

53	Klein edge of graphene	66
54	Nanotube-based light-emitting transistor	69
56	Schematic of a carbon nanotube based field-effect transistor (CNT-FET)	69
55	TEM images depicting lip-lip interactions during the fattening of multi-wall nanotubes	70
57	Time-of-flight mass spectra of C_n^+ clusters	72
58	Snapshots of a molecular dynamics (MD) simulation of the catalytic growth of a nanotube	75
59	Momentum quantization underlying the metallic or semiconducting character of carbon nanotubes	76
61	Bending energy of cylindrical graphitic structures	77
60	Schematic structure of a multi-wall nanotube (MWNT)	78
62	TEM image and structure of a nanobud	80
63	Structure and TEM images of nanohorns	80
64	Electronic band structure and density of states of metallic and semiconducting carbon nanotubes	83
65	Electronic density of states of isolated and bundled metallic carbon nanotubes	83
66	SEM images of nanotube yarns	85
68	TEM image of an onion	86
67	Schematic of nested fullerenes inside an onion	87
69	Structure of the C_{60} crystalline solid	88
70	Schematic structure of a peapod	89

71	Phase and reaction diagram of elemental carbon	91
72	Phonon band structure and density of states of a carbon nanotube	92
73	Phonon band structure and density of states of a graphene monolayer	93
74	<i>In-situ</i> imaging and characterization of single-wall nanotube growth	97
75	Diamond core formation inside a carbon onion	100
76	Transformation of metal-filled carbon onions	100
77	Atomic displacements during radial breathing mode (RBM) and G-band vibrations of a nanotube	101
78	Atomic structure of unreconstructed and reconstructed bare graphene edges	102
79	Schematic of the collapse of a wide nanotube to a nanotube ribbon	103
80	Transformation of a carbon nanotube to a helical ribbon	103
82	Structural model and Schlegel diagram of the C ₂₀ fullerene	106
86	Schematic representation of the <i>sp</i> ¹ , <i>sp</i> ² and <i>sp</i> ³ hybridization in carbon	110
89	Strain energy in fullerenes and nanotubes	113
90	Superconducting critical temperature in solid M ₃ C ₆₀ compounds	114
91	Structure of two nanotubes crossing on a substrate .	115
81	Origin of site asymmetry in Scanning Tunneling Microscopy (STM) images of graphite	116

83	Equilibrium structure of schwarzite	116
84	Coexistence of a scroll and a multi-wall nanotube (MWNT)	117
85	Sharpening of a multi-wall nanotube (MWNT) tip	117
87	Schematic structure of a graphite intercalation compound (GIC)	118
88	Schematic of a Stone-Wales transformation	118
92	Structure of a nanotube torus	120
94	Wigner-Seitz cell and Brillouin zone of graphene	121
93	Single-wall nanotube rings on a substrate	122
95	Principle of imaging in Transmission Electron Microscopy (TEM)	122
96	Schematic Transmission Electron Microscopy images of carbon nanostructures	123
97	Vapor-liquid-solid (VLS) growth mechanism of nanotubes	126
98	Scanning Electron Micrograph (SEM) of a vertically aligned nanotube array (VANTA)	126
99	Zigzag nanotube structure	131
100	First nanotubes.	138
