

# Beta decay

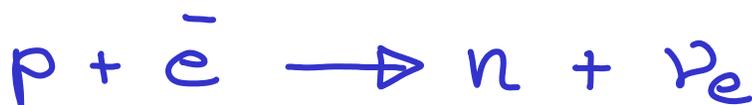

$$Q = [M({}^A_Z X) - M({}^A_{Z+1} D)] c^2$$

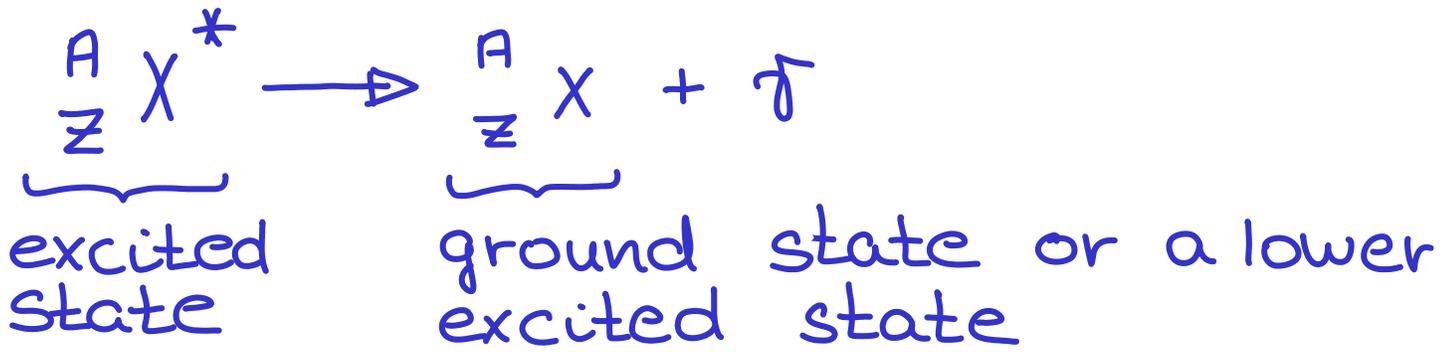

$$Q = [M({}^A_Z X_N) - M({}^A_{Z-1} D) - 2m_e] c^2$$

$$Q = [M({}^A_Z X) - M({}^A_{Z-1} D)] c^2$$

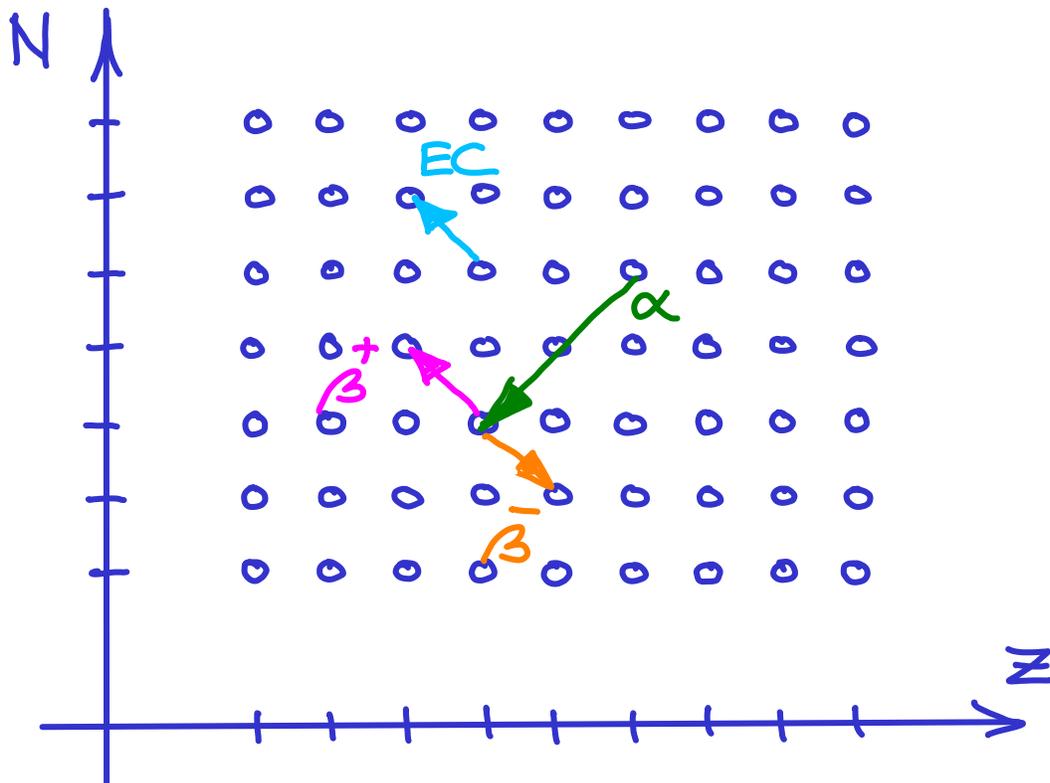

# Gamma decay

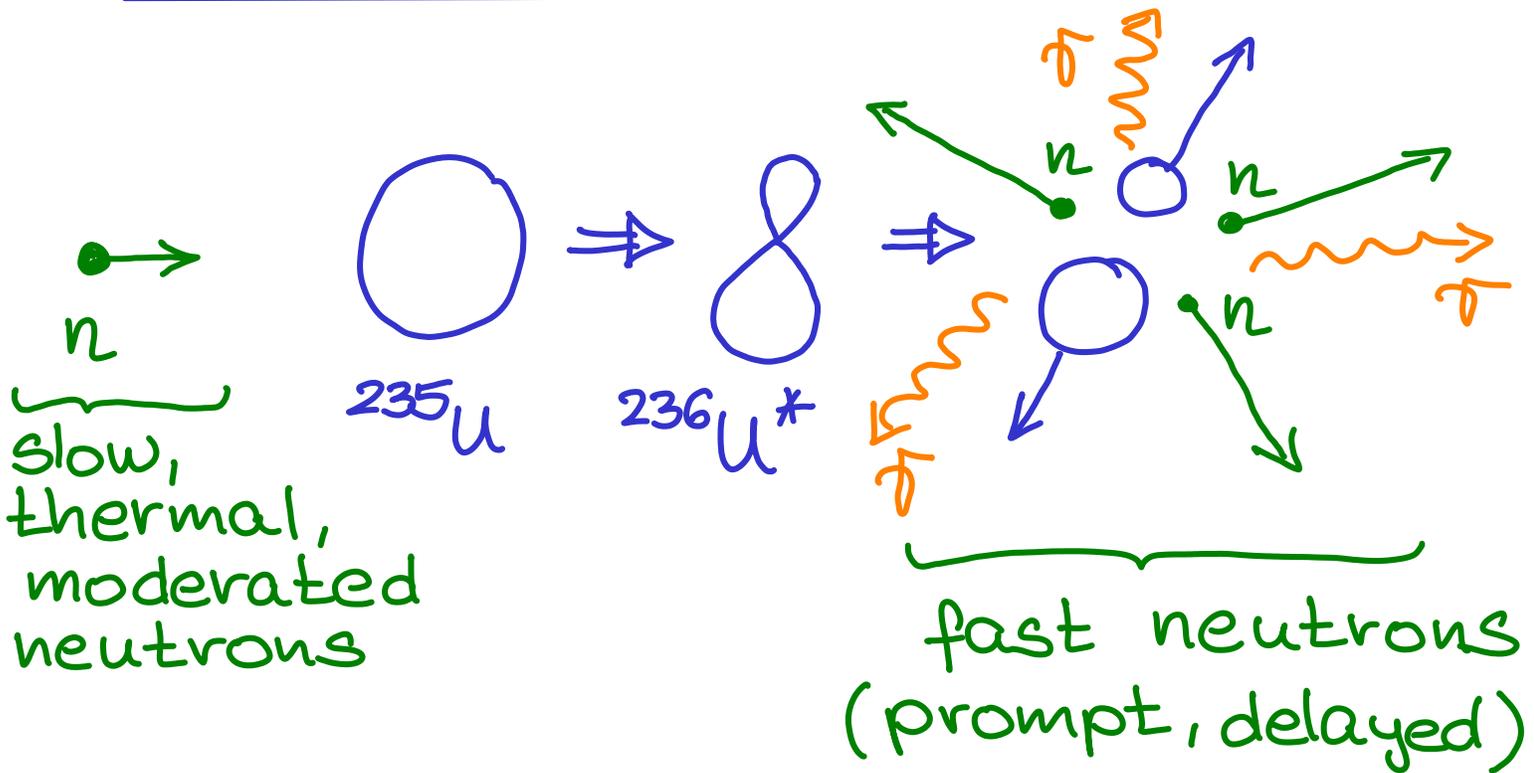

spin of  $\gamma$ :  $1 \Rightarrow$  there are meta-stable states called isomers or isomeric states with half lives of several years.

---

# Fission and chain reaction

Average energy released:

$\approx 200 \text{ MeV}$  in fission

$\approx 20\text{-}30 \text{ MeV}$  in later decay

$\approx 1\%$  of the rest energy

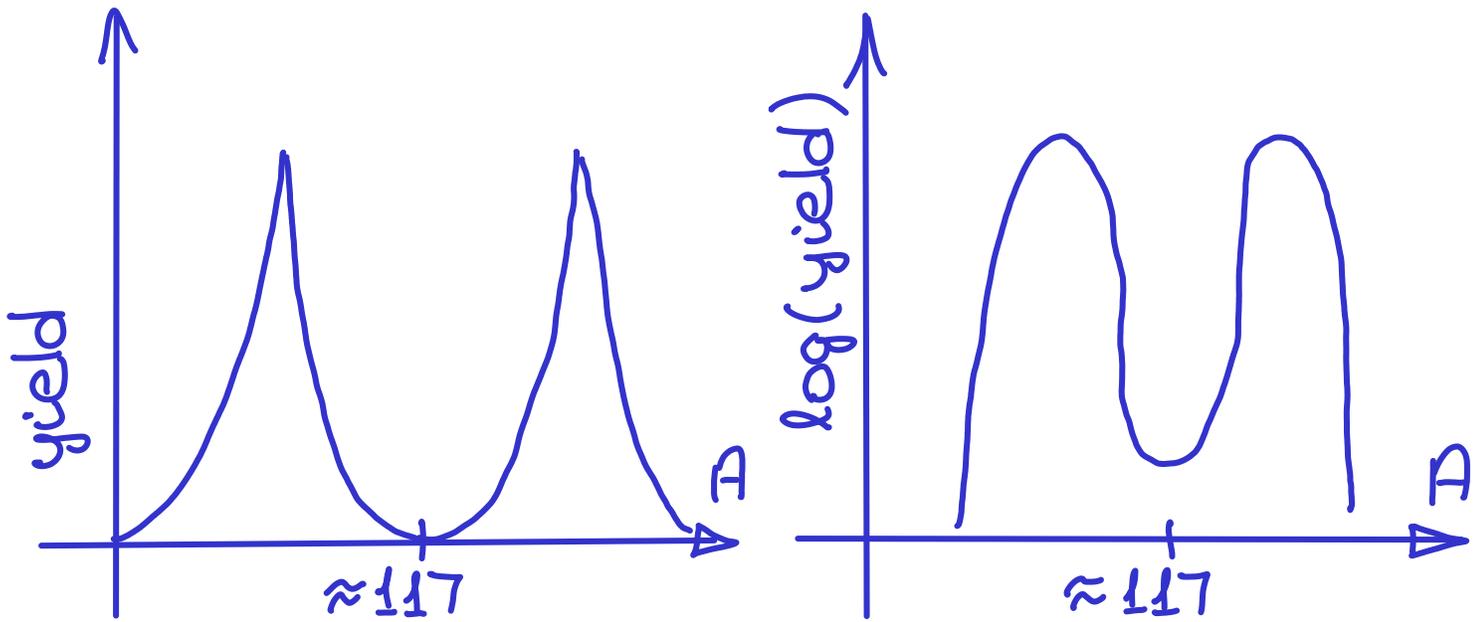

$(\text{C} + \text{O}_2 \Rightarrow \text{CO}_2 : 4 \text{ eV} \approx \frac{1}{10,000} \text{ of rest en.})$

Average number of neutrons released:  $2.45 \Rightarrow$  chain reaction

Fission: Otto Hahn (1944, Nobel), Fritz Strassman, Lise Meitner, Otto Frisch.

Chain reaction: Leo Szilárd
