

Hello, Abrams: A look at the new Digistar 5 System at the Abrams Planetarium

This year the Abrams Planetarium is celebrating its 50th anniversary and is doing so in style. After 20 years, the Digistar II projector has been retired and we upgraded to a digital fulldome Digistar 5 system from Evans and Sutherland. This system comes equipped with beautiful visualizations of scientific data across disciplines and easily integrates video and audio. We will show everyone this new system and its capabilities. We will take you an adventure through the universe and give you a sense of what it can do for outreach and visualization for the Physics and Astronomy department. Come and say hello to the new Abrams and enjoy the view!
