Keep this exam CLOSED until advised by the instructor.
50 minute long closed book exam.
Fill out the bubble sheet: last name, first initial, student number. Leave the section, code and form areas empty.
A two-sided handwritten 8.5 by 11 help sheet is allowed.
When done, hand in your test and your bubble sheet.
Thank you and good luck!

Practice Exam \#1

A car is waiting at an intersection. When the traffic light turns green, the car starts moving. After some time the car comes to rest at another traffic light. The figure below shows the velocity of the car as a function of time.

$$
\begin{aligned}
& \Delta v=-1 \mathrm{~m} / \mathrm{s} \\
& \Delta t=4 \mathrm{~s} \\
& d_{1}=\frac{0+12}{2} \cdot 4=24 \mathrm{~m} \\
& d_{2}=\frac{12+11}{2} \cdot 4=46 \mathrm{~m} \\
& d_{3}=\frac{11+0}{2} \cdot 4=22 \mathrm{~m}
\end{aligned}
$$

One can clearly identify three different stages of this motion.

3 pt What is the acceleration of the car during the second stage of the motion? (in $\mathrm{m} / \mathrm{s}^{\wedge} 2$ )

acceleration: $a=\frac{\Delta v}{\Delta t}$ $a=-\frac{1 \mathrm{~m} / \mathrm{s}}{4 \mathrm{~s}}=-0.25 \mathrm{~m} / \mathrm{s}^{2}$

3 pt What is the total distance travelled by the car between the two traffic lights?
(in m)
3.39.1
$\mathrm{B} \bigcirc 52.0$
$\mathbf{C} \bigcirc 69.2$
The area under the $v$ versus graph is equal to the distance travelled. The three slices are: $d_{1}=24 \mathrm{~m}, d_{2}=46 \mathrm{~m}$ and $d_{3}=22 \mathrm{~m}$. The total distance is the sum of these: $d=d_{1}+d_{2}+d_{3}=92 \mathrm{~m}$.

4 pt A tennis ball is tossed straight up into the air. It flies up, it reaches the peak position, and then it falls back down. What can we tell about the ball's velocity and acceleration, when the ball is at the peak of its trajectory? (Only one answer is correct.)
4.A $\bigcirc$ Both the velocity and the acceleration are zero.
$\mathbf{B} \bigcirc$ The velocity is zero, and the acceleration points up.
$\mathbf{C} \bigcirc$ The velocity points up, and the acceleration is zero.
$\mathrm{D} \bigcirc$ Both the velocity and the acceleration point down.
$\mathrm{E} \bigcirc$ The velocity is zero, and the acceleration points down.
$\mathbf{F} \bigcirc$ The velocity points down, and the acceleration is zero.
$\mathbf{G} \bigcirc$ Both the velocity and the acceleration point up.
$\mathbf{H} \bigcirc$ The velocity points down, and the acceleration points up.
$\mathbf{I} \bigcirc$ The velocity points up, and the acceleration points down.
